34. What is the difference between a round trip and one way ticket?
35. What is an airfare?
36. Do you carry-on or check your luggage?

**Read this story one sentence at a time in your group. Each person should read one sentence. Afterwards, take turns telling details from the story..**

Several years ago when my children were small, we decided to fly to Denver to go skiing. Because it was spring break, the airport was crowded. Our plane was delayed, but we finally boarded. We were sitting in the very back of the plane. As the plane accelerated down the runway and was about to lift off, we heard a very loud pop. Immediately, the pilot cut the engines and the plane settled back down onto the runway. He applied the brake and eventually we came to a stop on the runway. Then he turned the plane around and headed back toward the airport. The pilot announced that we had mechanical problems and would return to the gate. He told us that we would see some men outside the window with silver suits on, and that there would be some fire trucks. He told us this was just precautionary and we shouldn't worry at all. Soon we did see just what the pilot described. Many people seemed to be running about. The attendants quickly opened the doors and we deplaned. As we re-entered the airport, several reporters came running up to us. One of them stuck a microphone in my face and asked, "Were you on the plane that caught fire?" I said, "No". I pointed in the direction of our plane and said, "I came off of that plane." She said, "Yes, that plane was on fire. Didn't you know?" Sure enough, when I looked out the window, the tail section of the plane was blackened from smoke. People in the airport said they could see flames coming out of the rear engine when we tried to take off. I was a little scared to know how close we had come to an accident, but was relieved to have my family safe. Later that night, we boarded a new plane and flew on to Denver.

**Then tell your experiences with scary flights**
